

Long Term Partnerships

- Medin Corporation is committed to developing long-term partnerships with medical device manufacturers, and the result has been hundreds of successful custom product launches.

Commitment to Quality and Delivery

- We realize that the industry demands high quality products that are delivered quickly and on time, and we work at all levels in the company to provide the communication and service required to meet those demands.

Focus on Customer Requirements

- Our product development team deliberately outlines the requirements of each custom product that we develop so that all requirements are correctly identified as soon as possible in the development cycle. We focus on managing customer requirements throughout the process as they evolve to ensure that the final product delivered not only meets

or exceeds all form, fit and function requirements, but that it is also consistent with the aesthetic look desired. We aggressively strive to develop products that meet customer requirements with the most cost-effective solutions available. Early on in the process, we identify costs and timeline risks associated with selections and requirements and provide alternatives so that our customers are empowered to choose the options that are right for them.

Managing Costs and Risks for Customers

- Quotes are always developed with customer ordering preference in mind. Each quote breaks out the detail of relevant parts and subassemblies in quantities required, as well as costs for special processes, tools and services. Quotes also provide delivery timelines stating any relevant assumptions.

Partner of Choice

- It is through attention to detail and commitment to our customers that Medin Corporation has become known as the partner of choice for design & development of custom sterilization case, tray and accessory products.

Please contact Medin Sales at (888) 298-2146 or customersatisfaction@medin.com for more information.
